### Abstract of **ES 2141049 (A1)**

Aerosol pharmaceutical formulations which contain medium- chain triglycerides as surfactants. The formulation contains a drug, a hydrofluorocarbonate propellant, a surfactant made up of a medium-chain triglyceride of formula (I), in which R1, R2 and R3, which can be the same or different, represent a functional alkyl group of 5 to 11 carbon atoms, and a co-solvent of greater polarity than the propellant. In a specific embodiment the surfactant is a mixed ester of caprylic and capric acid. This formulation is suitable for the administration of drugs by the inhalatory route.
